

## RDL Professional 1

RDL Professional 1 is a cost effective ergonomic solution for height adjustable workstations. RDL Professional 1 height adjustable workstations have a single stage mechanism with a height range that suits most users. The frames are width adjustable with telescopic rails and suit rectangular top sizes from 1200 to 1800mm long.

At the push of a button RDL Professional adjusts to suit your next work height.

In the majority of Scandinavian countries height adjustable workstations account for 70% of all workstations and are recommended by their OH & S community.
