

## RDL Professional Hand Wind Up

The RDL Professional Hand Wind Up manually height adjustable frame (which is adjusted by using a crank handle), can be fitted to a variety of top sizes and shapes.

It allows anyone from very short to very tall to work at a desk with comfort and without the need for a footrest.

It copes well with a mobile workforce which varies greatly in height, allowing organisations flexibility in moving staff around, even from day to day.

It encourages mobility at the workstation; users can move from one part of the desk to another. This is in contrast to the static postures caused by a footrest which can only be reached from one position. Ergonomically, static postures are a source of musculoskeletal disorders and should be avoided at all costs. . It allows disabled people, especially wheelchair users, to work at any workstation at any time without costly adjustments to workstations or having to work in a specific area and being left out of the team.

Height adjustable desking is fully DDA (Disability Discrimination Act) compliant.
