UNIVERSAL ELECTRIC HEIGHT ADJUSTABLE SYSTEM

UNIVERSAL ELECTRIC HEIGHT ADJUSTABLE SYSTEM

Electric Universal Desking System.

With the concern for occupational health and safety issues, many organizations are taking preventative measures by using electric height adjustable computer desks to overcome problems related to static loading which occurs when seated for too long. Our desks are finding their way into creative design fields, in traditional offices, control rooms, 24x7 surveillance stations, on assembly lines and greatly reducing the incidence of workplace injuries.

This desk is a serious choice of the professional user. The desk frame has a lifting capacity of 150 kilos and the height can be adjusted in a **range of 65-122cm.**

You can select your desk top from the total range of Laminex Meltecas.
